AI is not a magic wand. The skills and knowledge you've built as a lawyer are still your most valuable asset.

However, that doesn't mean you need to do everything the hard way —in fact, you have an **ethical obligation** as a lawyer to maintain **technological competence** and understand where AI can support and augment your work.

While lawyers absolutely must master the legal principles and nuances of their practice, AI can dramatically **augment and amplify** their capabilities.

Read further to learn how legal professionals can safely sit on the cutting-edge with **easily verifiable** information, **trusted legal expertise and authority**, and rock-solid **data security and privacy safeguards**.

CoCounsel Legal

Accelerate your legal work with Fiduciary-Grade AI and the new CoCounsel Legal experience

Behind the build ↗

What is legal AI?

CoCounsel Legal is the **Fiduciary-Grade AI** solution from Thomson Reuters that brings generative AI (GenAI) and agentic AI capabilities that builds a plan and executes each step automatically. It handles a variety of legal tasks across Thomson Reuters products, Microsoft 365, and document management systems (DMS) partners.

The **intersection between AI and law** produced a need for overarching guidance to navigate such profound AI shifts in **legal technology**.

According to the **2026 AI in Professional Services Report**, the portion of professionals saying their workplaces are already using GenAI throughout the organization has nearly doubled in both individual and organizational use.

Four-in-ten respondents say their organizations are using GenAI, up from 22% last year.

Among legal professionals, **41% of law firms and 47% of corporate legal**

- Harnesses both **GenAI and agentic AI** — GenAI is technology that generates outputs in response to inputs whereas agentic AI plans, decides, and performs in response to inputs
- Plans and then carries out the best steps for a given project at your request by using expert-created **agentic workflows**
- Fiduciary-grade **agentic memory**
- Its Library takes the guesswork out of **prompting** so you can reach final results faster

With CoCounsel Legal, you can **conduct legal research**, **draft documents** through thorough analysis, and **provide strategic advice**.

Analyze documents

CoCounsel Legal's versatile **document analysis** capabilities help lawyers **review information of all kinds**, quickly surface actionable insights, and find the needle in the haystack among millions of pages.

It can answer complex questions about documents, compare and contrast them, provide tailored summaries, search vast databases, analyze arguments, and even detect mischaracterizations.

on the level of redaction and e-discovery coding. CoCounsel Legal can read and analyze a hundred pages in their entirety and answer complex questions about them in three minutes.

Mergers and acquisitions (M&A), for example, is a monumental and tedious task that can use some **aspects of due diligence automation**. Legal teams can **focus on more valuable tasks** that only a person can handle — the job you were trained to do and the job you enjoy doing.

One knowledge management counsel in an AmLaw 200 firm used CoCounsel and told us, “When I was a junior associate doing M&A contract due diligence, I remember spending so much time in the data room doing manually what CoCounsel can do in minutes. [This is] really amazing stuff!”

Find the needle in the haystack among millions of pages and rapidly distill complex information. Easily verify results of CoCounsel Legal, which **cite sources**.

One litigation managing attorney told us that “CoCounsel helps improve the quality of our representation. It finds things in 2,000- page police reports and transcripts that humans miss. And it doesn’t just read, it interprets — that’s the game-changer.”

> I’ll have a summary that’s near perfect and a timeline that outlines every significant event contextually in less than seven minutes. It saves us weeks!

Guy D’Andrea
Partner, Laffey Bucci D’Andrea Reich & Ryan

Accuracy, ethics, and trust

Repetitive and manual processes are prone to human error and can introduce an unnecessary element of risk. AI solutions developed and backed by expert **human oversight for accuracy in legal work** give you a competitive edge and reduces risk.

We've found that AI can do some routine tasks even **more accurately than a human can**, and in less time.

For instance, extracting key obligations for 2,000 contracts can take more than 80 hours and is prone to a human error rate of 10-20%. To mitigate inaccurate responses, CoCounsel Legal can **extract contract data** with at least 98% accuracy.

However, using AI in legal work raises significant **ethical concerns**. Attorneys must ensure they fully understand the technology they use as required by their duty to provide competent representation.

> Law firms can be reticent to turn on some AI features because they want to be sure about what they're going to do. There's a need to have confidence in how those solutions are being delivered.

Andrew Fletcher
Director of AI Strategy and Partnerships, Thomson Reuters Labs

They must stay up to date on technological advancements and understand the benefits, risks, and responsible use of AI such as the **ISO/IEC 42001:2023 certification** standard for AI management systems.

Ethical responsibility and accuracy are critical when it comes to **building and maintaining trust** in a AI for the legal workforce.

in different areas of legal practice.

However, evaluation and research for a trusted AI solution begins with asking the difference between a Fiduciary-Grade AI and consumer-grade tool.

CoCounsel Legal

A single Fiduciary-Grade AI solution for your legal practice

Compare plans ↗

A **public, free, or general use, AI** such as ChatGPT by OpenAI is **infamous for making up** fabricated answers because they do not have the proper guardrails.

Popular consumer-grade large language models such as OpenAI's GPT series, Anthropic's Claude, Microsoft's Copilot and Google Gemini each feature distinct architectures and training methodologies.

Thomson Reuters is leading the way in responsible AI innovation with the launch of the **Trust in AI Alliance** — a first-of-its-kind collaboration with industry leaders like Anthropic, Google, OpenAI, and AWS — uniting top experts to build AI

The future of the law firm: No time for bystanders amid AI's increasing influence

Access white paper ↗

Using general purpose LLMs on their own presents challenges — in addition to the need for trusted sources of data, professionals need to extensively test the output and validate answers, which is **challenging when the LLM does not cite its sources.** Since general purpose LLMs don't connect to everyday software tools like Microsoft Outlook or Westlaw, they contribute to silos.

Consider Fiduciary-Grade AI

35%% of law firm and 36% of corporate legal survey respondents said they have used paid industry-specific solutions that incorporate AI for legal work.

Current individual GenAI usage, by organization type

Law firm

Corporate legal

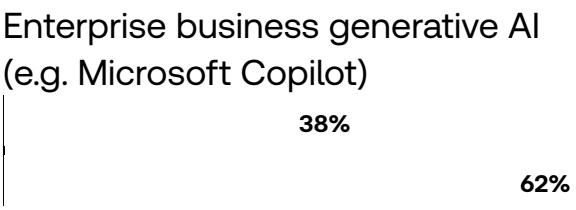

Publicly-available generative AI tools

Source: **2026 AI in Professional Services Report**

If you work with a Fiduciary-Grade AI that **only draws on authoritative content** and **expertise of Westlaw and Practical Law** as CoCounsel Legal does, then you can proceed with greater confidence.

For example, consider our partnership with Anthropic. An MCP integration brings **CoCounsel Legal into Claude workflows** to help legal work meet fiduciary-grade standards.

Now decision-makers in legal organizations must perform thorough due diligence on legal-specific AI solutions to determine the legal data used to generate responses.

Don't settle with **generic and vague references** to sources such as:

- "domain-specific content"
- "legal database"
- "legal text"

You're a lawyer — ask the questions required in due diligence to clarify **what kind of domain-specific, legal information is used**. It's a wise and foundational distinction to make.

President, Legal Professionals, Thomson Reuters

For instance, **CoCoBench** measures whether an AI system can complete real legal tasks. It is built around hundreds of attorney-authored benchmark tasks, with a fixed core dataset used to track performance over time.

More than 100 legal subject matter experts have contributed to the legal dataset, alongside research and engineering teams at Thomson Reuters Labs who developed the evaluation infrastructure, representing over 15,000 hours of practitioner and engineering work.

Comparison guide For a legal research specific comparison guide, see **Redline comparison for AI legal research at small US law firms**.

Testimonials

CoCounsel is already in use by over **1 million users**, including **20,000 law firms and legal departments** because it's enabling a fundamental and beneficial shift in how legal work gets done.

- 80% of Am Law 100 have CoCounsel
- Courts across the US federal court system — including the Supreme Court, circuit courts, and federal public defenders — as well as courts in 94% of US states have CoCounsel
