New Google offering tailored for legal sector

U.S. legal market is key AI battleground

Google Cloud is among Alphabet's fastest-growing businesses

WASHINGTON, Aug 25 (Reuters) - Alphabet's Google (GOOGL.O) on Tuesday expanded its Gemini Enterprise artificial intelligence platform with new tools for lawyers and law firms, accelerating a race among technology companies to meet legal sector demand for AI.

The company said its Gemini Enterprise for Legal would help law firms use AI to manage routine

and complex work to allow lawyers to focus on higher-value services, while keeping their data secure and confidential.

The new plug-in for Gemini Enterprise includes integration with legal software and data platforms and a stable of AI agents that Google said can handle specialized legal and administrative functions without significant human oversight.

Alphabet launched Gemini Enterprise for business customers in October in a bid to attract more corporate clients with its AI offerings. Google Cloud has become one of Alphabet's fastest-growing businesses.

In addition to legal, Google on Tuesday said it was unveiling industry tools for the financial services sector and would later roll out other industry-specific offerings.

Rival AI companies including Anthropic have also expanded their enterprise offerings in recent months, including in the legal sector. A 2026 report on the legal industry's adoption of AI from Deloitte found that law firms are investing heavily in the technology as part of a transformation that's still in its early stages.

Thomson Reuters, which owns Reuters and the Westlaw legal research database, is among the competitors for legal industry market share. On Monday it launched a proprietary large language model called Thomson 1.0 that is trained on its legal research content and built for professional work. It said the model is built on open-source technology and draws on decades of its own "authoritative" legal content.

Google said its platform will connect directly and securely to other legal technology platforms owned by Thomson Reuters, legal AI software developers Harvey and Legora, and others.

Law firms are rapidly adopting generative AI tools that can assist with legal research, draft filings and perform other legal tasks. Many are also using AI for business operations like client and case management, seeking to cut costs and improve efficiency.

Google's new offering is designed to be flexible for law firms, said Amrita Mehrok, a Google Cloud product director at the company, allowing them to choose among AI models embedded in the platform.

Some large law firms have formed strategic partnerships with AI providers and in some instances are building their own AI platforms. Google said Weil Gotshal, Cleary Gottlieb, Freshfields and Williams & Connolly are among a group of firms collaborating with it on Gemini Enterprise for Legal.

Weil Gotshal's co-managing partner Jonathon Soler in an interview said clients increasingly expect their lawyers to be using AI and taking advantage of its efficiencies.

Cleary Gottlieb managing partner Jeffrey Karpf said the firm's collaboration with Google would allow it to "be involved in the creation of useful tools for law firms deploying AI."

(This story has been corrected to update the list of connectors to remove Lexis and add Legora in paragraph 8.)
