# PS12942-PS12968-PS12973 - AI, thanks to the DeepSeek Authority action, Mistral and NOVA AI will provide transparent information on the risk of "hallucinations"

**PRESS RELEASE**

***The Authority has concluded three investigations, accepting commitments aimed at strengthening the information transparency of the systems offered, intervening on the channels for using the services (websites and apps) and in the various stages of the decision-making process preceding purchase or registration.***

In recent months, the Italian Competition Authority (Autorità Garante della Concorrenza e del Mercato) has extended its surveillance of unfair commercial practices to include generative artificial intelligence systems. In particular, it has addressed the risk of so-called "hallucinations," i.e., the production of inaccurate or misleading

content. In this regard, the Authority has conducted three investigations against the companies Hangzhou DeepSeek Artificial Intelligence Co. Ltd. and Beijing DeepSeek Artificial Intelligence Co. Ltd. ('Deepseek'), Mistral AI SAS ('Mistral'), and Scaleup Yazilim Hizmetleri Anonim Şirketi, which offers a *cross-platform chatbot* service called NOVA AI.

The three investigations concluded with the acceptance of the commitments, without finding any infringement pursuant to Article 27, paragraph 7, of the Consumer Code. The companies have undertaken specific obligations to strengthen information transparency regarding the risk of "hallucinations" related to the systems offered, by intervening on the service access channels (websites and apps) and at various stages of the decision-making process preceding purchase or registration. Permanent *disclaimers* have therefore been introduced in the user interfaces under the *chats* , warning, in Italian, of the presence of hallucinations, including with dedicated *hyperlinks .*

Furthermore, the pre-contractual information has been integrated and enriched with explicit warnings regarding the reliability limits of the generated content and the need to verify it. In the DeepSeek proceedings, the company also planned a technological investment to mitigate the phenomenon of "hallucinations," even though it is aware that—with the current state of technology—it is not possible to completely eliminate them. Finally, in the commitments relating to NOVA AI, it was also clarified to consumers that this service only offers access, through a single interface, to a few *chatbots* (about which further details were provided) *,* without providing a response aggregation and processing service.
